## KWC HOMEBOX – Convenience meets aesthetics

The KWC HOMEBOX is an impressively simple and versatile concealed solution for any bathroom size.

**The range of compact concealed solutions features a wide variety of products and allows for extremely simple installation. Products in this line can be combined in a variety of ways, from a simple shower situation to a complete thermostat system with two outlets in different surface colours. The various functions can be easily selected at the touch of a button. KWC HOMEBOX, the innovative solution for the stylishly minimal design bathroom.**

### **Intuitive operation**

As simple as a light switch. The water starts flowing when you press the Choice control button and stops when you press the button again. The water flow can also be precisely regulated on all thermostats using the control button.

### **Modularity for versatility in application**

With its modular design and specific functions, the KWC HOMEBOX is the ideal universal concealed system for any application. Lever or thermostatic mixer, single or dual outlet: the modularity of the components enables the system to fit seamlessly into the KWC product lines.

### **Easy installation and assembly**

The clever mounting concept makes installation particularly easy. The modules of the set are already connected to each other. Guaranteed easy alignment and installation thanks to pre-assembled boxes. The mounting rail for the boxes can be easily attached to the surface with millimetre precision. Screws secure the escutcheon holders firmly to the box and prevent splash water from penetrating. The escutcheons are attached to the escutcheon holder without a single screw. The minimal projection of the operating units leaves plenty of space for installing the fittings, for example in narrow shower cubicles.

### **Twice the talent for masonry and drywall construction**

The mounting rail is ideal for shell construction. It allows the box to be perfectly positioned and easily aligned. Retaining rings on the boxes mean that the KWC HOMEBOX can also be easily and securely attached to partition walls. If the hot and cold water inlets are installed incorrectly, the water flow can simply be reversed. If the box does not sit in the wall at the required installation depth, this can be quickly corrected with the extension sets.

### **Safe use**

Safety as standard. The hose outlet is secured against backflow in all variants in accordance with DIN EN 1717. A shutoff prevents possible scalding on all thermostatic mixers and the water temperature remains constantly below the critical value, even if the cold water fails.

#### **Additional information**

KWC Group Ltd.

As an international premium manufacturer of faucets and fittings, we are the epitome of Swiss quality, iconic design, and sophisticated functionality for product solutions in bathrooms, kitchens, and catering environments. Whether in the private or (semi-)public sphere – every single one of our products reflects almost 150 years of experience, expertise, and outstanding craftsmanship.

From the heart of Switzerland, we strive to sustainably enrich people's quality of life.
